DETAILED ACTION

Allowable Subject Matter

1. Claims 1-8 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Applicant's invention claims a flay-back type synchronous rectifying switching power supply device in which a rectifying element is surely turned off before the main switch is turned on even when the on-time of a main switch element is lengthened due to sudden variation of a load. The synchronous rectifying switching power supply device is equipped with a synchronous rectifying element connected to a secondary winding of a transformer series and driving means comprising an auxiliary winding. For turning on the synchronous rectifying element complementarily with main switch element between output terminals A transistor serving as interrupting means for turning off the synchronous rectifying element gate and source of the synchronous rectifying between the element. An off-timing at which the synchronous rectifying element is turned off by the interpreting means is set within a timing range which corresponds to a fixed time after the main switch element is turned on and also is as near as a fixed driving period of the main switch element is provided. None of the cited art over comes the claimed limitation of the instant application, since the claims are allowed.
